CAST CEO to Speak at Software Risk Summit 2016

Vincent Delaroche to discuss true business impact
of software risk and system downtime

New York – May 17, 2016 – CAST, a leader in software analysis and measurement, today announced its presence at the Software Risk Summit 2016: Preventing Software Disasters from Hitting the Market, taking place June 9th in New York City. CAST Chairman and CEO, Vincent Delaroche, will present on a panel of distinguished experts regarding the impact poor software risk management has on business operations and customer satisfaction.

"Software risk is often overlooked, but it is frequently the root cause of issues that business and IT executives continue to pay a very high price for," said Vincent Delaroche, Chairman and CEO of CAST. "Many of the most recent publicized breaches were actually not security related, but caused by wrongly engineered software – something that can be prevented through regular software analysis and measurement."

The Software Risk Summit 2016 is a one-of-a-kind industry event that drills-down into the causes of software risk and best practices for preventing software outages and data breaches. Additional panelists include:

- Dr. Paul Nielsen, Director and CEO of the Software Engineering Institute (SEI)
- Kevin Fedigan, CIO of Broker-Dealer Services and Asset Services at BNY Mellon
- Benjamin Rehberg, Managing Director at The Boston Consulting Group (BCG)

The event keynote will be delivered by journalist and industry commentator, Rana Foroohar. Rana is an assistant managing editor at Time and the magazine's economic columnist. She appears regularly on CNN as a global economic analyst, covering the intersection of economics, business, technology and politics. Her new book, Makers and Takers, was released today.

For more information about the event or to qualify to register through CAST at no cost, visit Software Risk Summit 2016: Preventing Software Disasters from Hitting the Market.

About CAST
CAST is the world leader in software analysis and measurement, with unique technology resulting from $130 million in R&D investment. CAST introduces fact-based transparency into application development and sourcing to transform it into a management discipline. More than 250 companies across all industry sectors and geographies rely on CAST to prevent business disruption while reducing hard IT costs and software risk. CAST is an integral part of software delivery and maintenance at the world's leading IT service providers. Founded in 1990, CAST is listed on Euronext (CAS) and serves IT intensive enterprises worldwide with offices in North America, Europe and India..
