

delaware Adds Software Intelligence from CAST to Its Cloud and Application Management Offering

Paris and Antwerp – 01/09/2020 - CAST, the leader in Software Intelligence, announced a partnership with delaware, a global IT and management consulting services provider. The partnership will provide clients with greater visibility into large technology portfolios and deliver the objective insights needed for informed decision-making throughout application modernization and cloud migration journeys.

Modernization is a challenge for many organizations; a process often wrought with roadblocks and IT complexities related to a lack of visibility into the application portfolio. delaware will implement CAST's powerful 'MRI for Software' to increase visibility into clients' IT portfolios. Delivering fact-based cloud readiness assessments and generating critical insights into applications will help clients make informed decisions around executing a meaningful digital transformation.

"Being an early cloud adopter, delaware has guided many of its customers through the journey of modernizing its IT estate. The CAST partnership strengthens our approach to modernization journeys by further automating the inventory process of the current IT landscape. This optimization will deliver rapid insights for IT managers or enterprise architects and more deeply analyze custom-built software," **says Tom Vandewinckele, Solution Lead Cloud Enablement & Operations at delaware Belux.** "Furthermore, we increase the migration speed and reduce risk by identifying applications that are particularly well-suited for the cloud. With CAST, we will be better positioned to bring our customers one step further than a lift and shift with grounded, application-level decisions and to deliver the true cloud value."

Planning and executing a viable cloud migration strategy is crucial for any organization looking to remain competitive in today's digital world. delaware will leverage CAST's 'MRI for Software' to rapidly analyze the actual source code of entire application portfolios, in order to be able to objectively assess its cloud-readiness.

"Business and IT owners face the challenge of prioritizing modernization efforts, ensuring the application changes safely proceed at pace. That requires accurate intelligence about the Cloud readiness, internal architecture, and evolving condition of the software being modernized," **said Alexandre Charlet, Managing Director of Northern Europe at CAST.** "The 'MRI for Software' from CAST automatically provides this type of intelligence and architecture visibility based on easy to understand, contextual analysis of all the data structures, code components and their interdependencies in critical business systems".

About delaware

delaware is a fast-growing, global company that delivers advanced solutions and services to organizations striving for a sustainable, competitive advantage. delaware guides its customers through their business transformation, applying the ecosystems of its main business partners, SAP and Microsoft. delaware continues to serve its customers afterwards, thus ensuring continuity of operations and continuous improvement. In all perspectives, delaware applies its own sustainable business model that aims for the long term. More than 2,400 professionals work in 12 countries spread over Europe, Asia and the Americas. About CAST

CAST is the market leader in Software Intelligence, achieving for software what MRI has for medicine: unprecedented visibility. Backed by almost \$200 million in R&D, CAST technology drives IT automation at the world's largest systems integrators and generates insight into complex systems by scanning and understanding software structure, architecture and composition. Customers rely on CAST to make fact-based decisions, see their architectures, detect security threats and ensure the safety and soundness of business applications and software products.
